August 3, 2006

To Whom It May Concern:

At Camp La Vida, we have had a very bad mold problem. Continuously, we have worked with various methods and different products to help with the removal of the mold and mildew. Until we found Mold Solutions Inc. of Lexington, SC and Chem-Tech Laboratories of Concord, NC and used their product, Bac-Shield, nothing provided a long term solution. While Bac-Shield does not remove the Mold Stain, it does kill the mold.

An independent third party certified Mold Inspector came in to swab this area and the samples were sent to the Environmental Screening Lab in Largo, Florida. It should be noted that the sample swab comment was "No detectable growth after incubation period". Therefore, it is my belief that Bac-Shield once applied to infested surfaces will prove to be the long term fix we need.

In addition, we applied Bac-Shield to the exterior of a building in early April. To date there is no visible mold/mildew/algae growth in the treated areas even though it has been exposed to weather.

In closing Chem-Tex Laboratories and Mold Solutions staff spent long hours identifying the source of our mold problems and developing the right formulation for our particular need.

For the above reasons, I recommend these companies for long-term mold and mildew treatment.

Sincerely,

S. Troy Coates
Business/Maintenance Manager
